

AWS Target Architecture - mirrors Azure labels and flows

Azure labels to AWS equivalents

- Azure Front Door + WAF -> CloudFront + WAF
- Azure Traffic Manager -> Route 53 latency routing
- Azure CDN + SAS -> CloudFront OAC + S3 signed URLs
- Azure App Service -> EKS or ECS services
- Azure AI Search -> OpenSearch Service
- Azure Key Vault -> Secrets Manager + KMS
- Azure VNet + Private DNS -> VPC + Route 53 private zones

Users and access

- Boeing user, Boeing admin, Boeing EXT contractor, Anonymous user
- Boeing IdP PingFed WSSO and FedProxy -> OIDC and SAML
- R/W APIs use Hivebrite JWT; R/O APIs allow anonymous access

Hivebrite SaaS Safety Experience -> iframe -> Timeline Web App AWS

Boeing.com -> iframe -> Timeline Web App AWS

FirstUp RSS Feed -> Timeline API Service

Route 53 latency -> CloudFront + WAF -> ALB -> EKS or ECS APIs

Region A us-west-2 VPC security boundary

- Public subnet: ALB + NAT Gateway
- Private app subnet: Timeline Web App, Timeline API, Search Web App
- Private data subnet: Neptune, Aurora PostgreSQL writer, OpenSearch, Redis
- Private endpoints: S3, Secrets Manager
- Private DNS: Route 53 private hosted zone for DB endpoints
- Secrets Manager + KMS; CloudWatch + X-Ray

Region B us-east-1 VPC security boundary

- Public subnet: ALB + NAT Gateway
- Private app subnet: Timeline API and Search API
- Private data subnet: Neptune replica or async, Aurora replica, OpenSearch
- S3 cross-region replication for media and static assets

DevOps subnet: EC2 Linux workstation for data loads to PostgreSQL

User categorization Lambda -> Hivebrite Admin API
